

Protect Your Business Network with Uniti

Cyber threats are on the rise — and small businesses are a top target.

From malware aimed at smart devices and point of sale systems to AI driven phishing attacks, today's digital risks can disrupt operations and put your business at risk.

Powerful Protection. Made Simple.

Connect+ keeps your business safe from cyber threats, so you can focus on what matters most—your customers and growth. With CONNECT+, you get advanced security that works behind the scenes, protecting your devices and sensitive information from hackers, viruses, and web threats. No complicated hardware or manual updates required.

Intrusion Protection

Stops unauthorized access attempts — blocking hackers and suspicious activity before they reach your network.

Virus & Malware Defense

Detects and blocks malware at the network level, protecting every connected device — computers, phones, tablets, smart devices, and more.

Web Threat Blocking

Prevents staff and guests from accessing dangerous websites or downloading malicious files — one of the most common causes of cyberattacks.

Wired Device Alerts

Instant alerts notify you when an unapproved device tries to connect, ensuring only trusted equipment gets access.

Extra Layers of Defense

CONNECT+ adds advanced protection by monitoring for malicious port scans and abuse of internet protocols — common tactics used by cybercriminals.

Enable these features in your Security Settings for added peace of mind.

Why Choose CONNECT+ Security?

- Protects every device on your network
- Always up to date — no manual maintenance
- Easy setup and control with the CONNECT+ app
- Trusted security designed for small businesses

Stay secure. Stay productive.
Choose CONNECT+ Security.

Uniti is customer obsessed! Your happiness drives our success. We are committed to providing outstanding service and a robust network experience for your business. Call 877-652-2321 today! | uniti.com

Understanding Today's Cyber Threats

CONNECT+ Security protects your business from the most common ways cybercriminals target small businesses.

Intrusions

Intrusions are attempts to break into your network—either from outside attackers or from a compromised device already connected. Hackers often probe networks looking for open access points or try to communicate with infected devices.

CONNECT+ blocks unauthorized access attempts and stops suspicious activity before it can cause harm.

Viruses & Malware

Viruses are malicious programs that spread between devices, putting sensitive data, software, and business operations at risk. While traditional antivirus software protects individual computers or phones, it doesn't cover every device on your network.

CONNECT+ blocks unauthorized access attempts and stops suspicious activity before it can cause harm.

Web Threats

Web threats happen when someone clicks a malicious link, visits a fake or compromised website, or downloads an infected file. These attacks often look legitimate and are one of the leading causes of security breaches—especially for small businesses.

CONNECT+ blocks dangerous websites and downloads before they can compromise your business.

Advanced Network Protection

Your protection goes even further. CONNECT+ includes additional security layers that monitor for advanced attack techniques, such as malicious port scans and abuse of internet communication protocols.

These protections can be enabled in your Security Settings for added peace of mind.

Wired Device Alerts

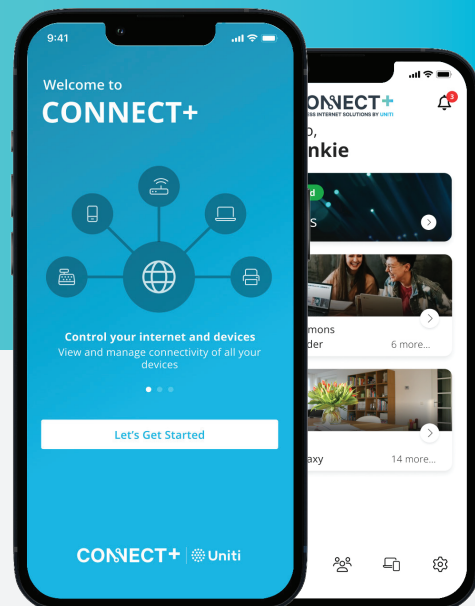

Unapproved devices can create serious security risks. Wired Device Alerts notify you when a new or unknown device attempts to connect to your network.

You stay in control — only approved devices get access.
